THE SCHOOL STARTER GUIDE

Your school. Your setup. *Step by step.*

Set up your school, prepare admissions, organise exams and results, then manage fees and everyday school work.

Admissions & school setup → Academics → Finance → Daily operations

For school administrators and finance teams
Includes a parent payment walkthrough
October 2026 · Edition 1

START HERE

Your first actions after signup

School portal → sign in as your school administrator

Work through the three phases below. Use the school portal link in your welcome email. Menu visibility depends on your role and subscription; an absent button may require your school administrator.

01
Admissions
& school setup

02
Academics
& examinations

03
Finance
& enrollment

1. Verify your email and complete any required two-step verification. Confirm that you are in the correct school portal.
2. **Prepare Admissions first:** configure the school, calendar, classes, staff accounts and integrations. These setup screens are under **Administration** in the current portal. Then use **Admissions** for learner applications.
3. **Next, Academics:** add subjects, assign subject teachers, confirm grading rules and plan assessments. Prepare now; enter marks and generate reports once learners are enrolled and exams have been marked.
4. **Then, Finance:** set class fees, generate invoices, confirm payment or approved waiver, and return to Admissions to complete enrollment.
5. Use the remaining menus for attendance, curriculum, staff, communication, school operations and ongoing reporting.

> School settings, users and integrations are found in **Administration**. **Admissions** is the application pipeline. Follow the exact menu routes printed on each page.

Final readiness checklist	45

Prepare the school before applications

Administration → School, Calendar, Users, Classes, Integrations

Start here immediately after creating your tenant account. This is the foundation for Admissions, Academics and Finance.

1. **School:** save your school name, currency, timezone and operational settings.
2. **Calendar:** create the academic year, create its terms, then mark the intended term current.
3. **Users:** create individual accounts for teachers, admissions officers, finance officers and school leaders. Select each person’s correct role.
4. **Classes:** create classes for the correct academic year, set capacities and assign class teachers after their accounts exist.
5. **Integrations:** prepare account email delivery and the school payment methods you intend to offer.
6. **Admissions:** create learner applications and review them through the pipeline. Stop at Fees Pending until Finance is ready.

> A teacher login, a class-teacher assignment and a subject-teacher assignment are separate records. Complete the first two here and the subject assignment in Academics → Setup.

Administration: every submenu

Administration

School

School name, boarding status, transport availability, currency, timezone, attendance thresholds and staff attendance times. Save these before entering operational records.

Classes

Create or edit a class, its capacity, academic year and class teacher. Choose the correct year so the class appears with its terms.

Calendar

Create academic years and terms, enter their dates and select the current term. Check the top-bar term before billing or recording results.

Users

Create logins and choose roles such as Teacher, Admissions Officer, Finance Officer, Principal, Vice Principal or Parent. Manage status and account access here. Staff records alone do not create login access.

Permissions

Review which actions each role can perform. Use this when someone cannot see a menu or button.

Audit trail

Review who changed a record, when they changed it and the recorded changes. Use it to investigate discrepancies.

Security

Configure two-step verification and recovery access for your account.

Integrations

Configure school payment methods and email delivery. Details follow in this section.

Site settings

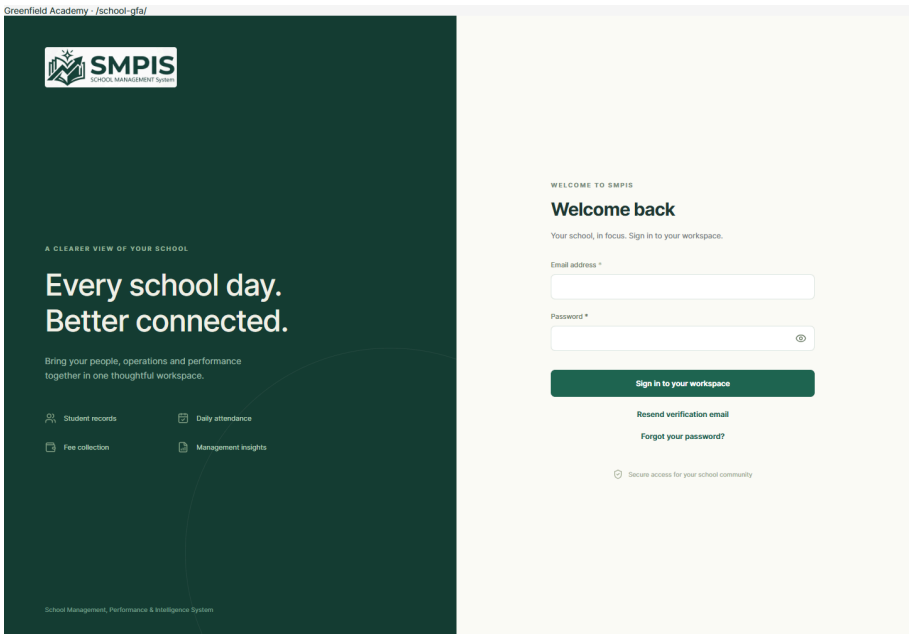

Manage the school site settings available to the school administrator, including presentation and branding options shown in the portal.

SCREENSHOT WALKTHROUGH

Your first sign-in

School portal → Sign in

Your school workspace starts with your own administrator account. Keep the school portal link from your registration email: this is the same link you will share with teachers and parents.

Portal example · School portal → Sign in

1. Open the verification email received after signup and verify your email address. Check Spam or use Resend verification email if needed.
2. Open your school portal and sign in using the email and password you registered with.
3. If asked to finish administrator security setup, add SMPIS to an authenticator app, enter the six-digit code, and keep the recovery codes somewhere safe.
4. Bookmark the school portal. Parents use this same school login page; their Parent role gives them a different menu after sign-in.

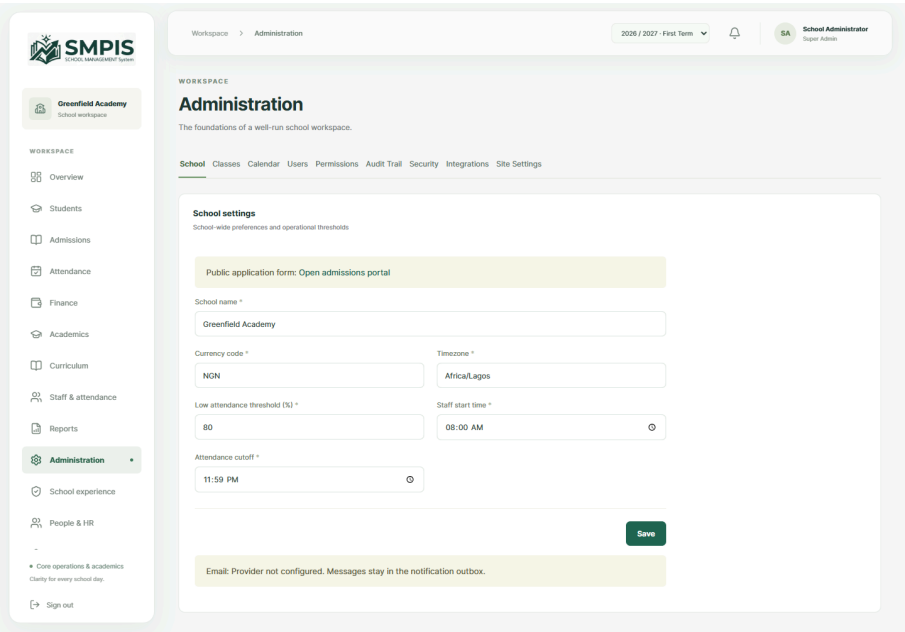

> Ready when: you can open Administration. If verification email does not arrive, contact SMPIS support before creating another school account.

SCREENSHOT WALKTHROUGH

Check the school foundations

Administration → School

A few minutes here prevent confusing fee amounts and dates later. Greenfield Academy is our fictional example school throughout this guide.

Portal example · Administration → School

1. Check the school name, currency and timezone. For a Nigerian school, examples are NGN and Africa/Lagos.
2. Check the attendance threshold, staff start time and attendance cutoff against your school policy.
3. Save changes. Confirm the currency before adding fees and payment methods.

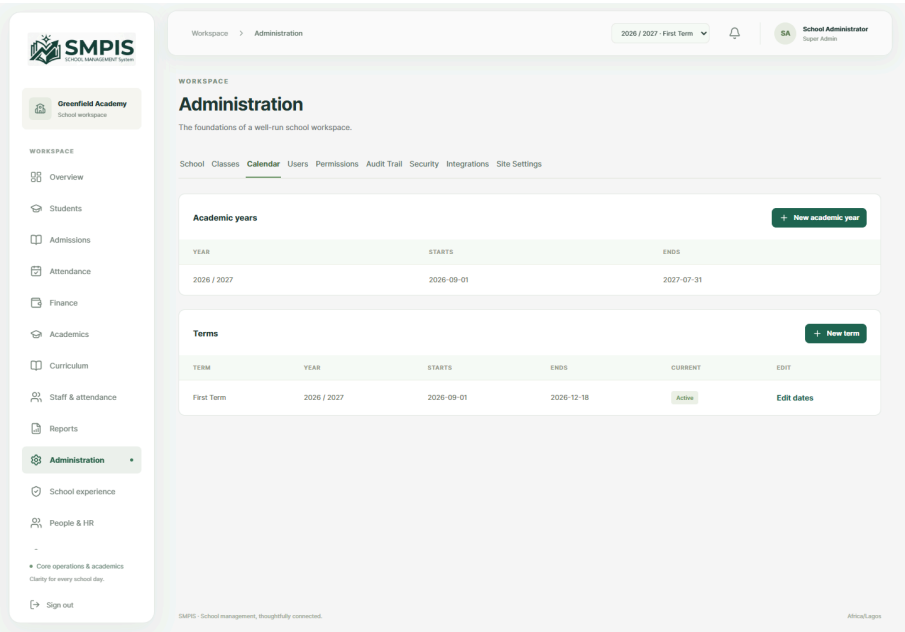

> Have ready: your class list, calendar dates, fee schedule, teacher emails, learner records and school bank details. Start with one class and one family, then repeat the flow.

SCREENSHOT WALKTHROUGH

Put the calendar in place

Administration → Calendar

Classes belong to an academic year. Fees and invoices belong to a term. The term selector at the top of the workspace controls the term you are working with.

Portal example · Administration → Calendar

1. Review the academic year and term created during registration. Use New year or New term for any additional periods you need.
2. Enter the correct names and start/end dates. Associate each term with the intended academic year.
3. When creating the active term, select Make this the current term. If editing an existing term, use the current-term control in the term list.
4. Select the intended term in the top bar before configuring fees or generating invoices.

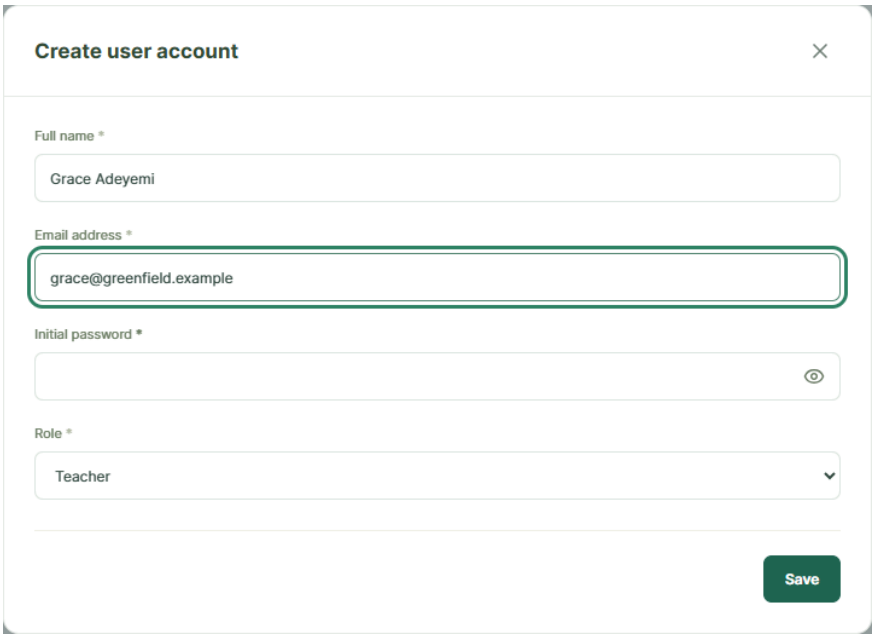

> Example: 2026 / 2027 academic year, First Term. Use your own dates. Ready when: the top bar shows the term you intend to bill.

SCREENSHOT WALKTHROUGH

Give teachers their own accounts

Administration → Users → Create account

A teacher needs a user account to sign in. A staff employment record serves a separate purpose; it does not automatically create login access.

Portal example · Administration → Users → Create account

1. Enter the teacher’s Full name and unique Email address.
2. Set an Initial password of at least 12 characters and choose the Teacher role. Save.
3. Read the delivery message: account creation can succeed even if the account email fails. Resolve the delivery issue before assuming the teacher has received credentials.
4. Repeat for other teachers. Use the appropriate role for finance and other staff instead of sharing the administrator login.

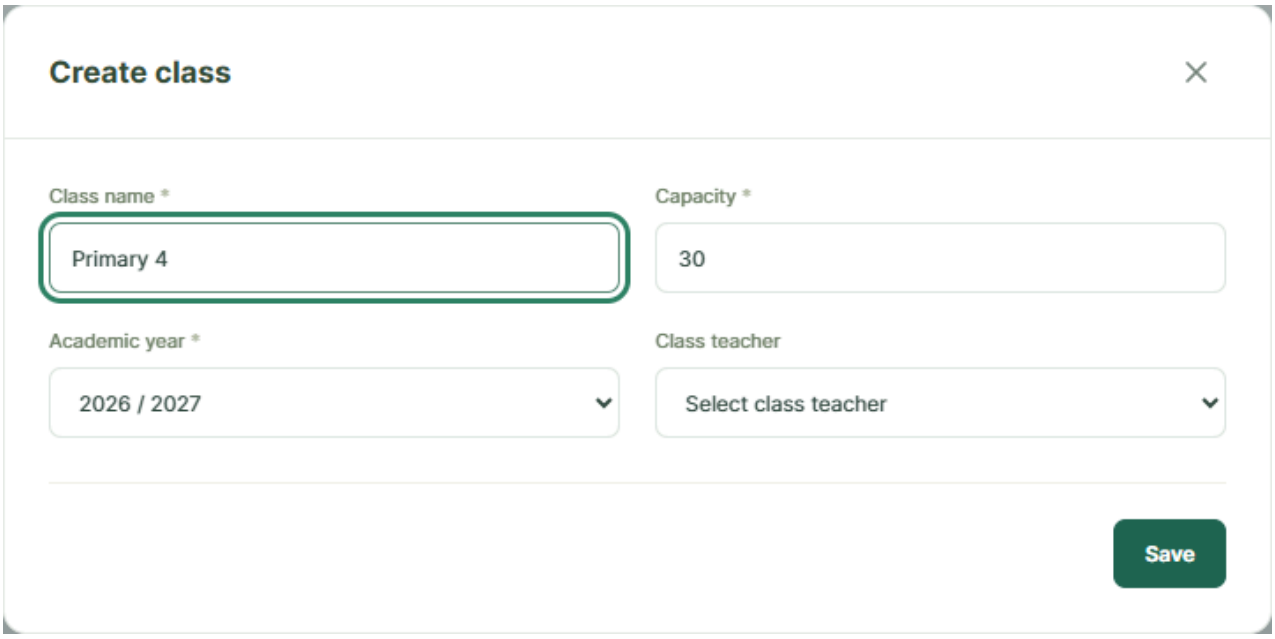

> The account email includes the portal link and credentials when email delivery is configured. Ask users to choose their own password with Forgot your password and enable two-step verification under Administration → Security.

SCREENSHOT WALKTHROUGH

Create the classes you actually run

Administration → Classes → New class

Use names your teachers and families recognise: Nursery 1, Primary 3, JSS 1A or SS 2 Science. Create separate classes for separate streams.

Portal example · Administration → Classes → New class

1. Enter the Class name and Capacity. Capacity is the maximum enrollment for that class.
2. Choose the correct Academic year.
3. You may leave Class teacher blank until the teacher account exists. Save the class.
4. Repeat for every available class. Check the year and capacity in the class list.

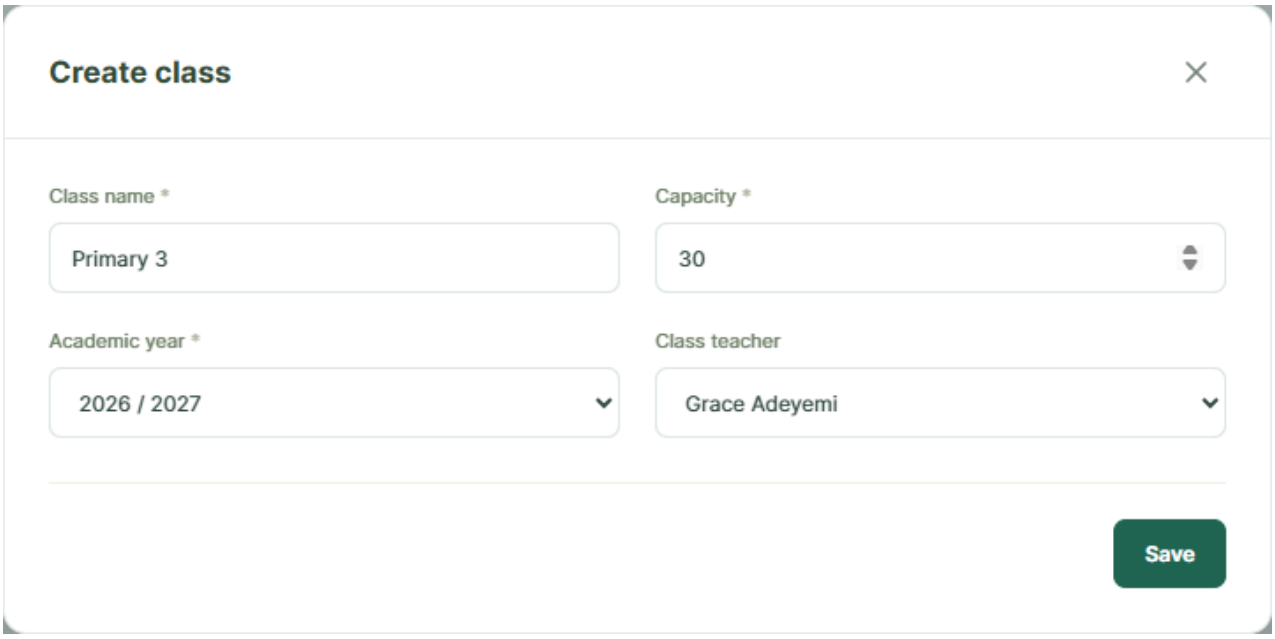

> Ready when: each class appears in the list. Avoid creating duplicate classes simply to change the teacher; use Edit class.

SCREENSHOT WALKTHROUGH

Assign a teacher to a class

Administration → Classes → Edit class

Creating a teacher account and assigning a class are two separate actions. The class assignment determines which learners a teacher can work with.

Portal example · Administration → Classes → Edit class

1. Find the class and click Edit class.
2. Choose the teacher in Class teacher. Check the academic year and capacity, then save.
3. Confirm the Class teacher column now shows the intended teacher. Repeat for other classes.
4. If you also need an employment record, add it under Staff & attendance and associate it with the teacher’s user account where offered.

> Ready when: the teacher can sign in using their own account and see the assigned class. Academic subjects and teaching allocations can be configured next for results workflows.

Give each person the right role

Administration → Users → Create account

Full name, Email address and Initial password

Enter the actual user’s name and a unique working email. Use an initial password of at least 12 characters. Check the account creation and email delivery result separately.

Super Admin

The school tenant administrator handles school setup, user access, integrations and term entry controls. This is separate from the platform owner console.

Teacher

Records marks for explicitly assigned subjects and works with permitted learners. A class-teacher assignment alone does not grant grading access to every subject.

Admissions Officer

Processes applications and learner admission records. This role does not replace the school administrator for integrations or account setup.

Finance Officer

Manages permitted invoices, payments and fee records. Give finance work to a finance account rather than sharing an administrator login.

Principal and Vice Principal

Manage academic setup and report preparation within their permissions. Publishing and administrator-only actions depend on role.

Proprietor

Reviews available school summaries. This role does not currently have score-entry permission.

Parent and Student

Receive access to their linked records and published results. Link accounts to the intended learners; a matching name alone does not create access.

> Create each teacher, admissions officer and finance officer as a separate user. Check the Permissions submenu if their available actions differ from the examples.

What each integration does

Administration → Integrations

Manual fee payments

Publishes bank name, account name, account number and transfer instructions. Parents submit a transfer reference; school finance checks actual funds before crediting an invoice.

Paystack

Uses the school merchant public key and secret key for online school fee checkout. Enable live payments only after testing the configured school account.

Flutterwave

Uses the school public key, secret key and webhook secret to collect and verify online school fees.

Stripe

Uses the school secret key for Stripe Checkout. Configure and test the account shown in the school integration panel.

PayPal

Uses the school client ID and client secret for PayPal payments in a supported school currency.

SMTP email

Configures the school sender and email server for account invitations and other supported messages. Check hostname, port, credentials and sender, then verify delivery.

Twilio

Stores SMS credentials and sender information. The current application does not yet provide SMS delivery; saving credentials does not send messages.

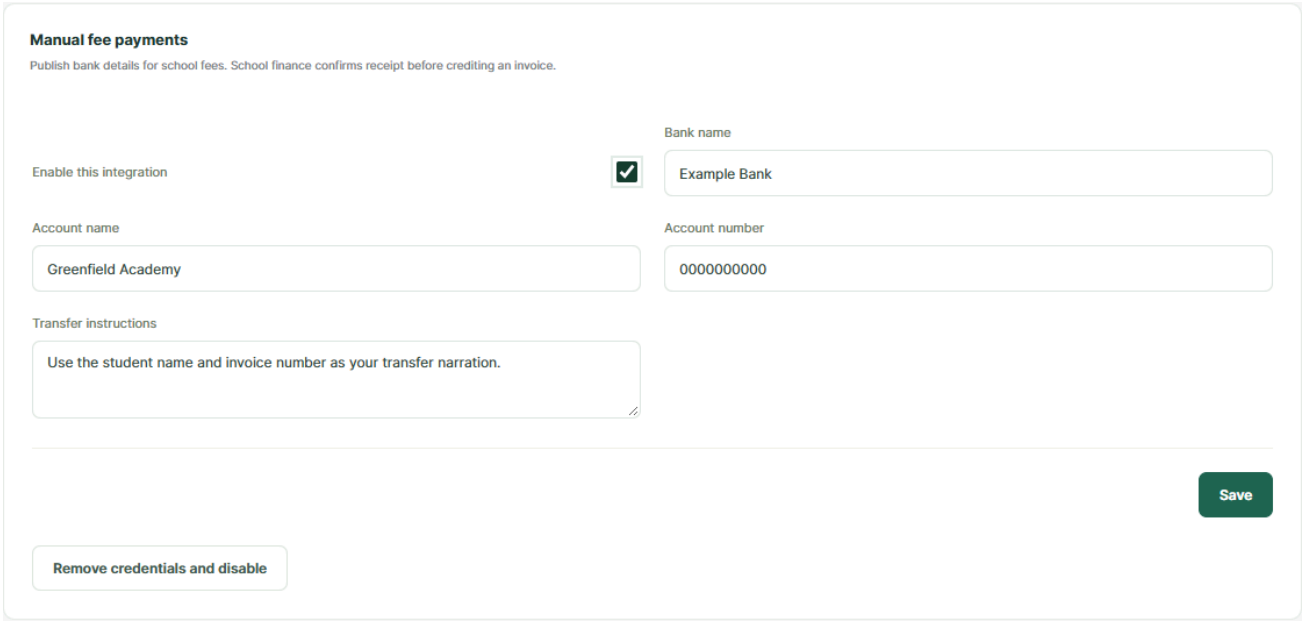

> The Enable integration switch controls availability. Test mode confirms the setup without crediting live invoices. Leave a saved secret blank when the form says a blank value keeps the existing credential.

SCREENSHOT WALKTHROUGH

Offer school bank transfer

Administration → Integrations → Manual fee payments

Manual bank transfer is a practical first payment method. Parents see the school's bank details, make the transfer, and submit its reference. Finance then checks receipt of funds.

Portal example · Administration → Integrations → Manual fee payments

1. Sign in as the school's Super Admin and open Integrations.
2. Enable Manual fee payments and enter Bank name, Account name, Account number and Transfer instructions.
3. Use clear instructions such as "Include student name and invoice number in the narration." Save.
4. Confirm the account details carefully. The account shown in this screenshot is fictional and must not be used for payment.

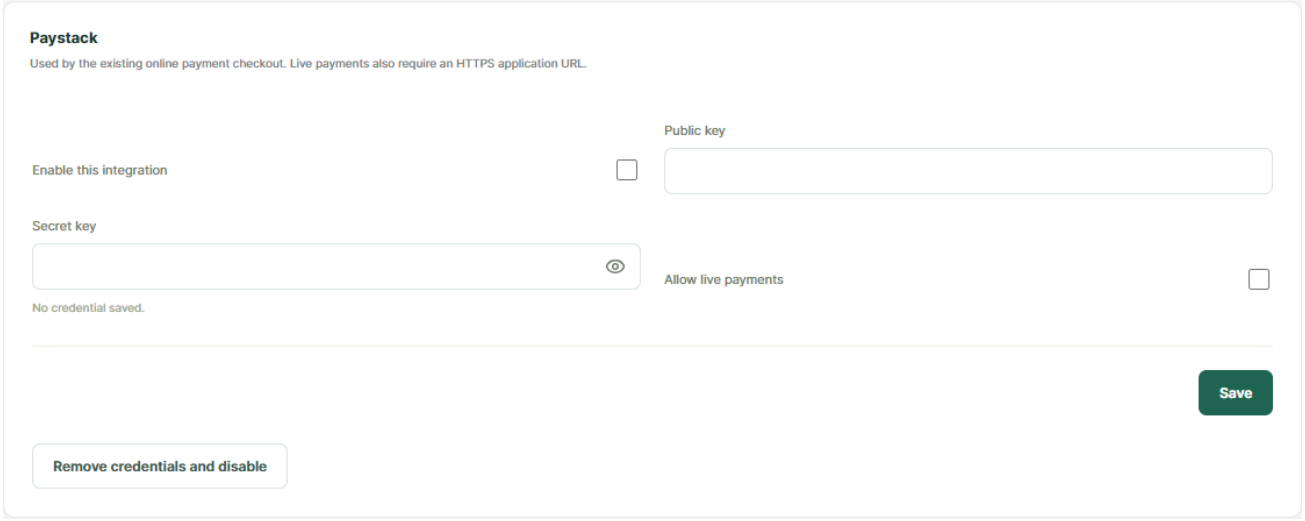

> Ready when: Manual bank transfer appears in the parent's School payment method list. A parent submission remains pending until school finance confirms the funds.

SCREENSHOT WALKTHROUGH

Enable an online payment gateway

Administration → Integrations → Your provider

The portal includes Paystack, Flutterwave, Stripe and PayPal settings. Choose a provider that supports your school's country and currency, using your school's merchant account.

Portal example · Administration → Integrations → Your provider

1. Obtain the credentials from your provider's dashboard. Enter the fields shown in its integration panel and enable the integration.
2. Save test credentials first and run a test checkout. Test-confirmed transactions do not reduce real invoice balances.
3. For real collection, save live credentials and select Allow live payments. Paystack also requires the application to have an HTTPS URL.
4. Confirm that your provider is available in the parent payment form. If it is missing, check credentials, currency and live availability with support.

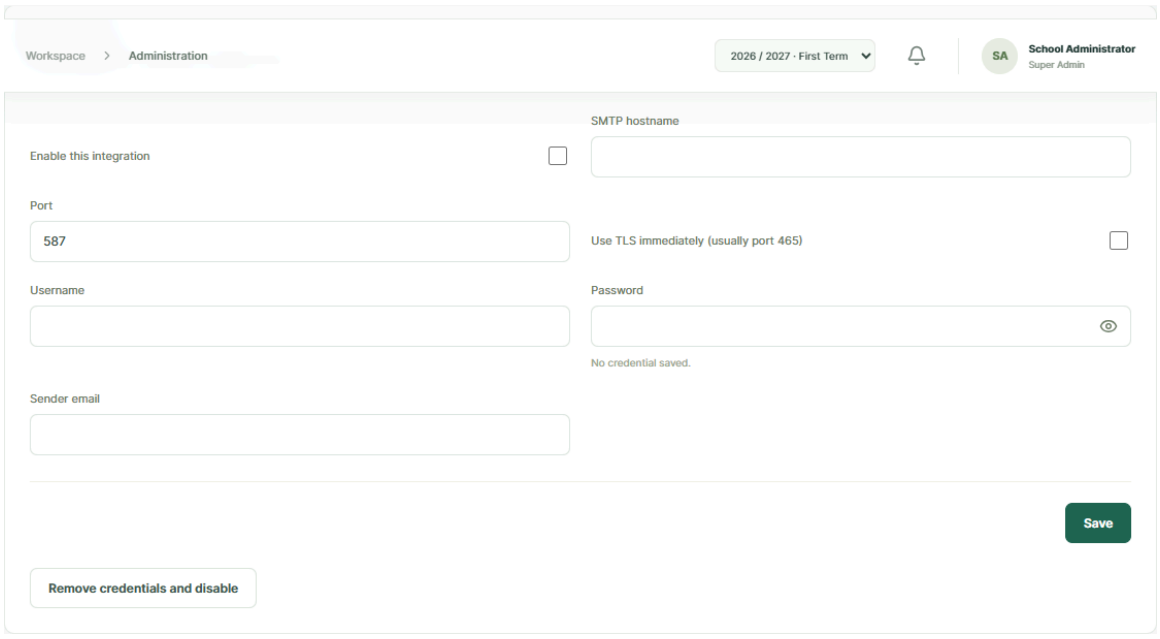

> Use provider documentation or support for merchant verification and any required callback/webhook setup. Share portal login details with parents; gateway secret keys stay in the administrator settings.

SCREENSHOT WALKTHROUGH

Make account emails useful

Administration → Integrations → SMTP email

Teachers and parents should receive a clear invitation instead of having to ask you for every login detail. Account emails include the school, role, email username, initial password, portal link and security guidance.

Portal example · Administration → Integrations → SMTP email

1. If your school uses its own email service, enter its SMTP hostname, port, username, password and sender email. Enable and save.
2. Use the TLS option exactly as your email provider instructs; the panel identifies immediate TLS as usually port 465.
3. If school SMTP is not configured, account emails can use the platform email service when it is configured.
4. Check the delivery result after creating an account, and test password reset with a demo user. Ask support to check the public portal URL or platform mail setup if links or delivery fail.

> Ready when: a demo user receives working portal and reset links. This guide explains email delivery; it does not configure SMS delivery.

Understand the application pipeline

Admissions → New application / Application pipeline

New application

Captures learner names, gender, date of birth, intended class and guardian details. The intended class must already exist.

Application pipeline and stage filter

Shows each applicant, guardian, class, stage and next action. Filter by stage to find work waiting on the admissions office.

Submitted → Reviewed

Register the application, inspect its information and record the review notes requested by the action.

Assessment Scheduled → Decision Pending

Arrange the applicant's admission assessment and record the decision process. This admission screening is separate from a term exam in Academics.

Offered → Fees Pending

Issue the place offer and prepare the learner for billing. Finance must confirm the required invoice is paid or waived before enrollment.

Enrolled / Rejected

Enrolled is the completed admission outcome; manage that learner under Students. Rejected records an unsuccessful application.

Enroll

At Fees Pending, review the term and class, then confirm Enroll student after fee and capacity checks pass.

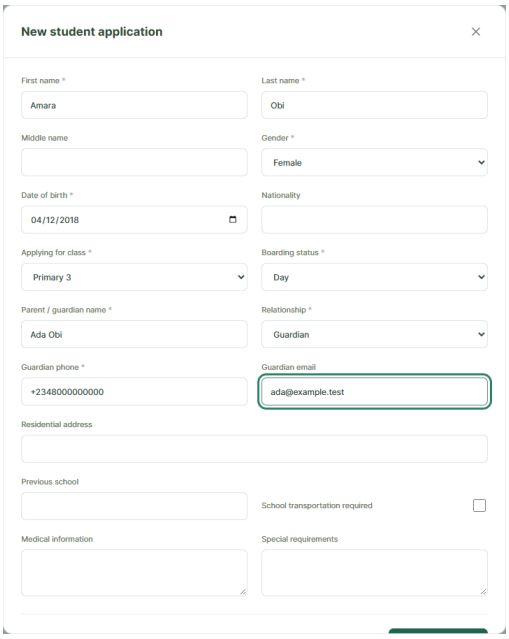

> Start applications now, then continue to Academics and Finance setup. Return to the enrollment walkthrough in the Finance section after the invoice has been settled or waived.

SCREENSHOT WALKTHROUGH

Add a learner through Admissions

Admissions → New application

In this version, Admissions is the entry point for a new learner. You then manage their profile under Students. Start with a complete application so teachers and finance have consistent records.

Portal example · Admissions → New application

1. Click New application and enter the learner’s names, gender, date of birth and Applying for class.
2. Complete the parent/guardian name, relationship, phone and email. Include relevant address, boarding, transport and medical details.
3. Click Create application and review the application list. Repeat for each learner.
4. For learners already attending your school, use this same supported admissions flow to establish their records and complete the enrollment checks.

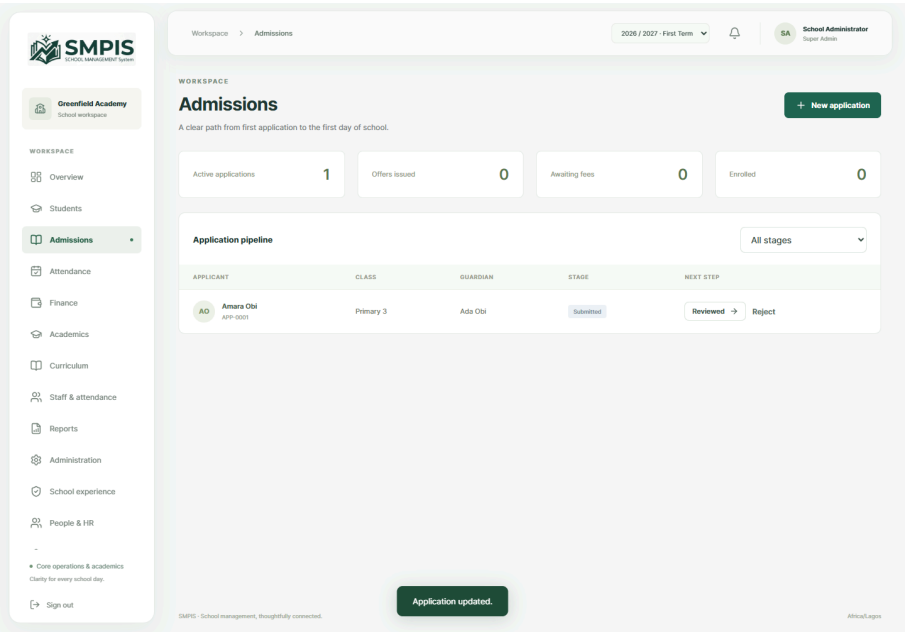

> Ready when: the learner appears in the application pipeline. Entering a guardian email does not create a parent login or link the learner to an account.

SCREENSHOT WALKTHROUGH

Move the application toward enrollment

Admissions → Application pipeline

The pipeline lets the office track progress rather than guess which learners are ready. Each application moves one stage at a time.

Portal example · Admissions → Application pipeline

1. Move through Submitted → Reviewed → Assessment Scheduled → Decision Pending → Offered → Fees Pending.
2. At each action, enter review notes as appropriate and confirm the next stage.
3. At Fees Pending, prepare the learner's invoice and parent account using the next pages.
4. After the term invoice has been fully paid or authorised finance staff have waived it, use Enroll and confirm Enroll student. Capacity and academic-year checks must also pass.

> Enrollment requires a paid or waived invoice for the selected term. A partial payment or pending bank transfer does not satisfy that requirement.

Academics: every submenu

Academics → select the correct term

Setup

Create subjects, assign each class subject to a teacher, configure grading rules and control score-entry closure. Academic managers perform setup; teachers use their assigned subjects.

Assessments

Create exams, tests, continuous assessments, assignments, practicals or projects. Filter by class and subject; use Grade / enter scores to record marks.

Records

Check historical class rosters, amend membership or elective subjects with a reason, set a class grading policy and schedule the exam timetable. Available to academic managers.

Gradebook

Review class and subject totals, grades and completion. Use the Grade buttons above the summary to open assessment score entry directly.

Report cards

Generate class drafts, review student reports and comments, finalize approved results and publish them to families. Reopen a batch for authorized corrections.

Analytics

Review available performance summaries and academic support alerts. Investigate missing scores and trends before making decisions about a learner.

> The selected term determines the class year, assessments and results you see. If a class or exam appears missing, check the term, class filter and subject assignment first.

Subjects, assignments and grading policy

Academics → Setup

1. **Create subjects:** enter the subject details shown in Setup. Where offered, select a class and active teacher while creating the subject.
2. **Create teaching assignments:** connect each class and subject to the teacher who will enter marks. Repeat for every class/subject combination; check the saved assignments.
3. **Set the grading scale:** enter each grade letter, minimum percentage and points. Thresholds must be unique and the lowest threshold must include 0.
4. **Set the pass mark:** choose the percentage used for pass/below-pass outcomes. Enable ranking and GPA only if your school uses them.
5. **Review academic support thresholds:** set the decline, repeated failure, attendance and curriculum lag values used by school alerts.
6. **Check Records:** select the class to verify the term roster and elective subjects. Use Class grading policy if that class needs an approved policy different from the school default.

> A teacher sees only their assigned subjects. If the teacher cannot create or grade an exam, an academic manager should check the subject assignment before recreating the exam.

Create an exam that can be graded

Academics → Assessments → New assessment

1. Choose the term in the top bar, then open Assessments and click **New assessment**.
2. Select the **Class** and its assigned **Subject**. If no subject is available, create the teaching assignment in Setup first.
3. Enter an **Assessment name**, for example “Mathematics final exam”, and select **Assessment type: EXAM**.
4. Enter **Maximum score**: the number of marks on the paper. A paper marked out of 60 uses 60 here.
5. Enter **Term weight (%)**: its contribution to the subject’s term result. For example, CA 40% and exam 60% total 100%. Maximum score and term weight are separate values.
6. Choose an **Assessment date** within the term dates, then click **Save assessment**. Check the class, subject, maximum and weight in the list.
7. Repeat for other assessments. Total subject weight may not exceed 100%; it must equal 100% before reports can be generated.

> **Example:** a learner scores 45/60 on an exam weighted 60%. The exam contributes (45 ÷ 60) × 60 = 45 percentage points to the term result. CA of 32/40 weighted 40% adds 32 points, giving 77%.

Put exams on the timetable

Academics → Records → Exam timetable → Schedule exam

1. An academic manager selects the correct term and opens **Records**.
2. Click **Schedule exam**. Choose the class and subject, exam date, start time, end time, room and invigilator shown in the form.
3. Check the time range and date, then save. Resolve any overlapping class, room or invigilator booking before retrying.
4. Review the saved row in **Exam timetable**. Use **Reschedule** to change an existing booking.
5. Also create the score-bearing exam under **Assessments → New assessment → EXAM**. The timetable booking schedules the sitting; the assessment holds the maximum score, term weight and marks.

> Before exam day, confirm that every planned sitting has the correct class, subject, invigilator and room, and that the corresponding assessment exists for grading.

Enter marks safely, one exam at a time

Academics → Assessments → Grade / enter scores

1. Select the correct **term, class and subject**. Locate the exam by name. Teachers must be assigned to that subject.
2. Click **Grade / enter scores**. You can also open **Gradebook** and use the exam's **Grade** button above the summary.
3. Check the exam name, maximum score and student list. Enter each learner's raw mark, from 0 to the exam maximum. The grade preview uses the applicable grading policy.
4. Use **0** for a real zero mark. Leave a learner blank if their mark has not been recorded. A blank does not count as zero and leaves results incomplete.
5. Review the entered count and any validation message. Out-of-range marks block saving. Click **Save scores**; only changed students are submitted.
6. Reopen score entry to verify the saved marks. Continue later for remaining learners. You may save partial marking before all subject weights total 100%.
7. If you close with changes, choose whether to discard them. Save before leaving the page; unsaved changes are not automatically saved.

> The term end date alone no longer closes grading. Score entry stays open until explicitly closed by the administrator, or until the class report batch is finalized.

02 · GRADING TROUBLESHOOTING

Resolve a blocked grading task

Academics → Assessments / Records / Setup

Exam or class missing

Check the top-bar term and class/subject filters. An academic manager should confirm the class belongs to the selected academic year and the subject is assigned to the teacher.

Student missing or no students listed

Have an academic manager open Records for the class and term. Check roster membership, excluded learners and selected elective subjects. Amend the roster with a reason when appropriate.

This subject is not assigned to you

An academic manager must correct the teaching assignment in Setup. A class-teacher assignment does not substitute for the subject assignment.

Term closed for score entry

The school administrator opens Setup → Term entry controls. Reopen entry or set Temporarily unlock until to today or a later date, supply a reason and save. The temporary unlock expires after its selected date.

Results are finalized

An authorized academic leader opens Report cards → Reopen batch and records a reason. A closed term must also be unlocked separately.

Save button unavailable

Check that a score has changed, every entered value is valid, students exist in the roster and the assessment is unlocked. Wait if a save is in progress.

Gradebook says Incomplete

Check all required subject marks and assessment weights. Previously saved marks can exist while the combined result remains incomplete.

From completed marks to draft reports

Academics → Report cards → Generate reports

1. **Check the roster:** all intended learners and subjects must be correct for this class and term. Correct membership in Records before generating.
2. **Check assessments:** each required subject must have assessment weights totaling exactly 100%.
3. **Check marks:** enter every required assessment score for the students taking that subject. Resolve Incomplete results in Gradebook.
4. An authorized user clicks **Generate reports**, chooses the **Class**, then clicks **Generate drafts**. If validation fails, correct the reported missing marks or weights and retry.
5. Under **Student report cards**, click **View report**. Review subject totals, grades, pass outcomes, overall average and any enabled GPA or ranking.
6. While the report is a draft, enter the **Teacher comment** and the authorized leader's **Principal comment**, then click **Save comments**.
7. If marks change after drafts were generated, regenerate the class drafts before final review so the report snapshot reflects the corrected marks.

> Draft generation does not publish results to parents. Review the report content before moving the class batch to finalized status.

02 · APPROVE & PUBLISH

Finalize, publish, download and correct

Academics → Report cards → Class report batches

Finalize results

After checking drafts and comments, an authorized academic leader finalizes the class batch. Finalization protects the result snapshot and blocks score changes.

Publish reports

A user with publishing permission publishes the finalized batch. Linked parent/student accounts can then see their published academic results.

Download PDF

Open a student's View report and click Download PDF. Families open Academic results for their linked published reports and use the same download action.

Reopen batch

For a correction, an authorized user selects Reopen batch and supplies a reason. Reopening a published batch withdraws it from family accounts until the revision is finalized and published again.

Correct and regenerate

Unlock the term as well if it was explicitly closed. Correct marks or roster details, regenerate drafts, review comments and totals, then finalize and publish again.

Archived revisions

Where available, use Report version in the report detail to inspect older report revisions. Archived reports are read-only.

Close score entry

After marking and publication are complete, the administrator may use Setup → Term entry controls to close further entry. This is an explicit school action, independent of the term end date.

> Teachers enter assigned-subject marks. Principals and other authorized academic leaders manage report approval according to their permissions. A missing action should be checked against Administration → Permissions.

Finance: every submenu and action

Finance → select the correct term

Invoices

Lists learner bills and balances. Filter Unpaid, Partial, Paid, Overdue or Waived. View invoice shows charges and payment history; use its invoice PDF and receipt links.

Fee structures

Sets the class/term price list. Select Class and Term, then Set fee for each category and amount. Saving a fee structure does not itself generate all learner invoices.

Concessions

Records approved learner discounts or concessions. Check how the concession appears on the learner’s invoice before asking the parent to pay.

Generate invoice / Batch invoices

Creates a learner bill or class bills from the relevant fees. Check the selected term, due date, line items and any batch result errors.

Record a payment

Lets authorized finance staff record a received payment against the correct invoice, amount and reference. Check actual receipt before posting.

Installment plan / Waive invoice

Where offered, record planned payment dates or an authorized waiver with its required explanation. A promise or planned installment is not a received payment.

School payment tracking / Online payment tracking

Shows payment references, amounts, mode and verification status. Use Check payment for supported pending online transactions; finance confirms manual bank receipts.

Make a fee payment / Pay school fees

The parent payment flow: choose the linked child’s invoice, enabled school method and amount, then follow checkout or transfer instructions.

Complete the first learner’s journey

Finance → Admissions → Students

1. Set each class fee category for the correct term under **Finance → Fee structures**.
2. Create any required parent login under **Administration → Users** and link the learner’s record to that account where available.
3. Generate the learner’s invoice, review its charges and confirm the school payment method is enabled.
4. Have the parent pay the intended invoice. Online payments must be verified; manual transfers must be checked against the school bank receipt.
5. Review the invoice’s balance and payment history. For admission, the required paid/waived check must pass; a partial payment may still leave enrollment blocked.
6. Return to **Admissions**, find the application at **Fees Pending** and complete **Enroll → Enroll student** after the capacity and fee checks pass.
7. Confirm the learner in **Students**, check the parent link and verify the learner appears in the correct class/term roster before grading.

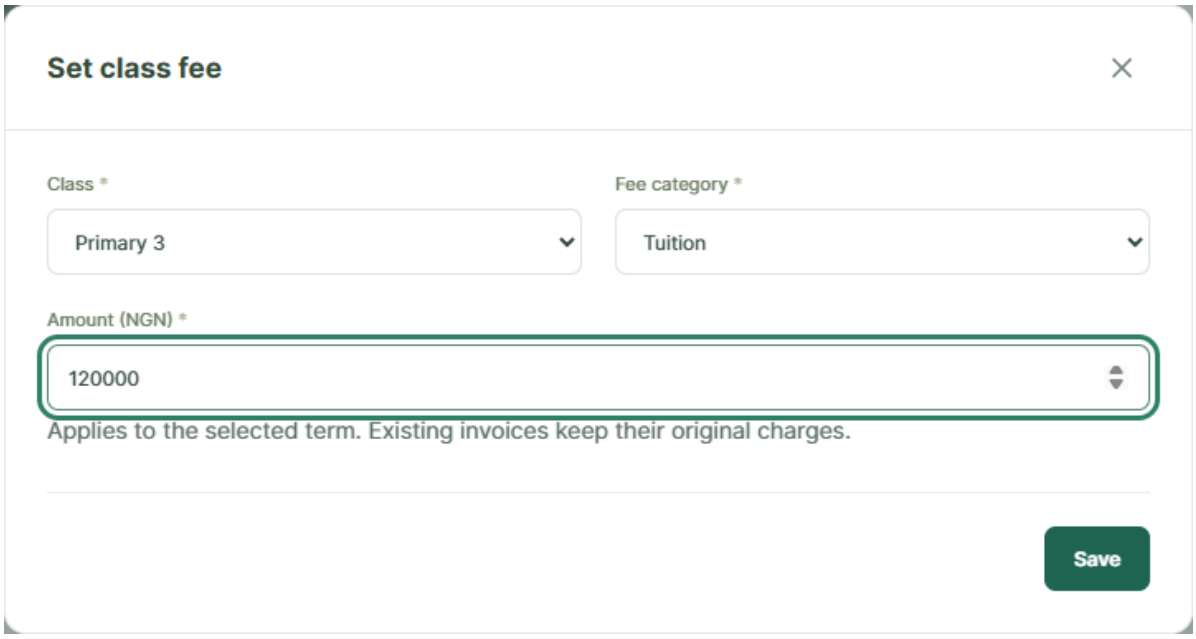

> School fee payments are separate from the school’s SMPIS subscription. Use Finance for learner fees and Subscription for the school’s service plan.

SCREENSHOT WALKTHROUGH

Set class fees for the term

Finance → Fee Structures → Set fee

A fee structure is your price list. An invoice is the individual bill created from that price list. Adding a fee does not automatically send a bill to every learner.

Portal example · Finance → Fee Structures → Set fee

1. Select the correct academic term in the top bar.
2. Click Set fee, select Class and Fee category, and enter the amount in the displayed school currency. Save.
3. Add each applicable category: tuition, boarding, transport, exam, books, uniform, meals, activity or other.
4. Repeat for other classes and terms. Review the saved fee list before generating invoices.

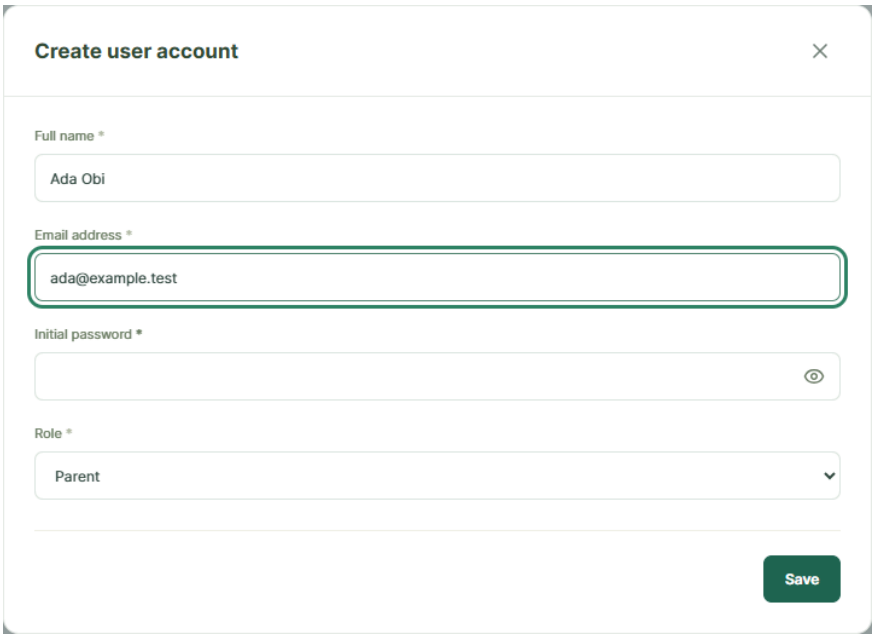

> Example: Primary 3 tuition = NGN 120,000 for First Term. Existing invoices retain their original charges when fee structures change. Review concessions and transport/boarding eligibility before billing.

SCREENSHOT WALKTHROUGH

Create the parent login

Administration → Users → Create account

Create one account for a parent and link all of that parent's children to it. The parent signs in with their email address, not their child's name or student number.

Portal example · Administration → Users → Create account

1. Enter the parent's Full name and Email address, set an Initial password and choose Parent as the role. Save.
2. Check the delivery result. The account exists even if email delivery fails; resolve that failure before sending the family their welcome message.
3. In the Users list, note the ID beside this Parent account. You will enter that ID in each child's profile.
4. Ask the parent to open the school portal link and use Forgot your password to set a password they chose themselves.

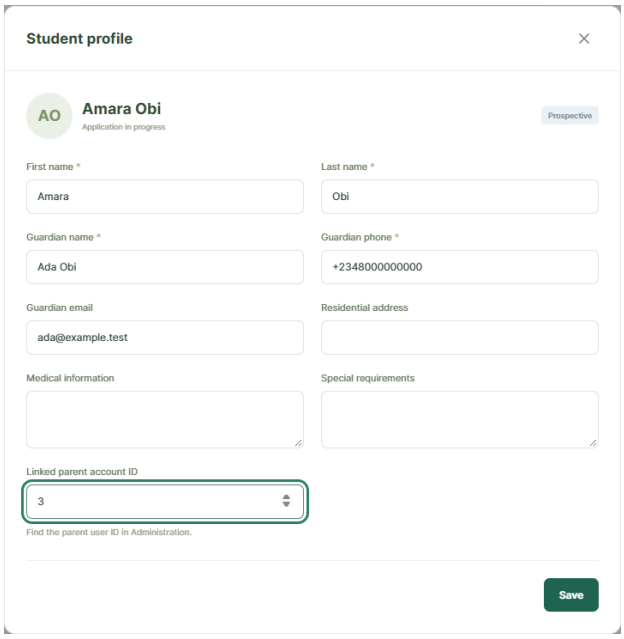

> The login page is shared by the school community. After sign-in, the Parent role provides My children and the family's finance access.

SCREENSHOT WALKTHROUGH

Link every child to the parent

Students → View profile → Edit profile

This link is what gives the parent access to the learner's records and invoices. Matching guardian names or emails alone is not enough.

Portal example · Students → View profile → Edit profile

1. Find the learner under Students and open View profile, then Edit profile.
2. Enter the parent user ID from Administration → Users in Linked parent account ID. Save.
3. For siblings, repeat on each child's profile using the same parent ID.
4. Have the parent sign in and check My children. If a child is missing, verify the saved ID, the Parent role and the school account.

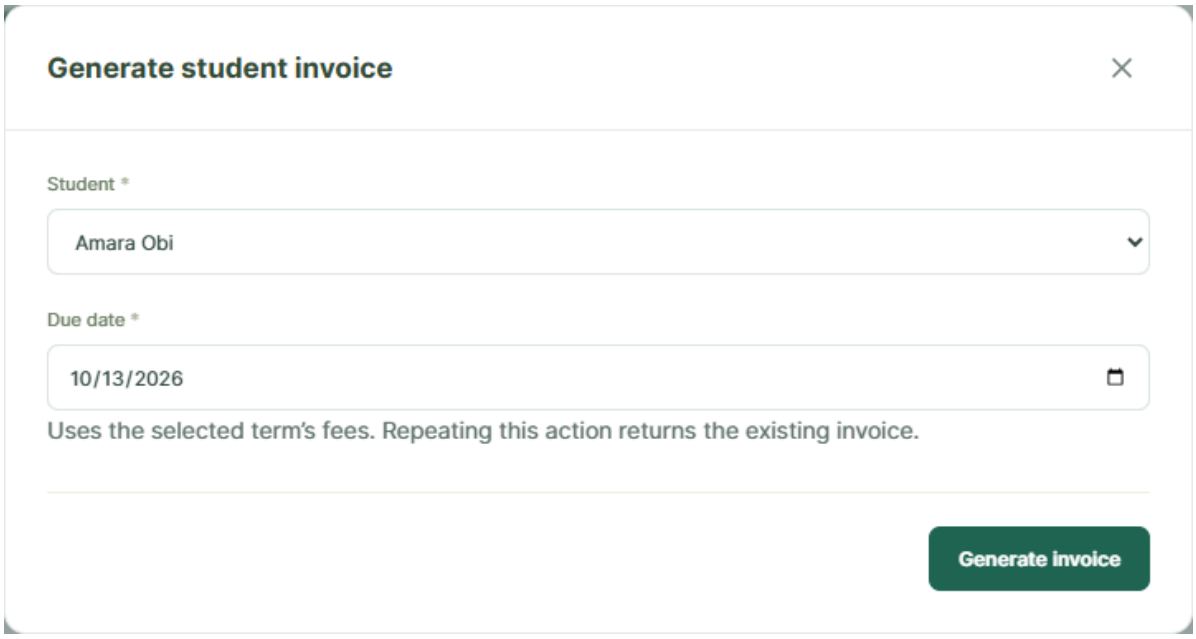

> This version provides one Linked parent account ID per student record. Plan the family's primary portal account accordingly.

SCREENSHOT WALKTHROUGH

Generate the learner’s invoice

Finance → Generate invoice

Now turn the class fee schedule into a bill the parent can pay. Generate the invoice while the learner is awaiting fees; enrollment comes after the payment check.

Portal example · Finance → Generate invoice

1. Confirm the correct term in the top bar.
2. Click Generate invoice, choose the Student and Due date, then click Generate invoice inside the form.
3. Open View invoice to review line items, concessions, totals and balance.
4. For enrolled class groups, Batch invoices generates invoices for the chosen class and selected term; review any per-student issues shown.

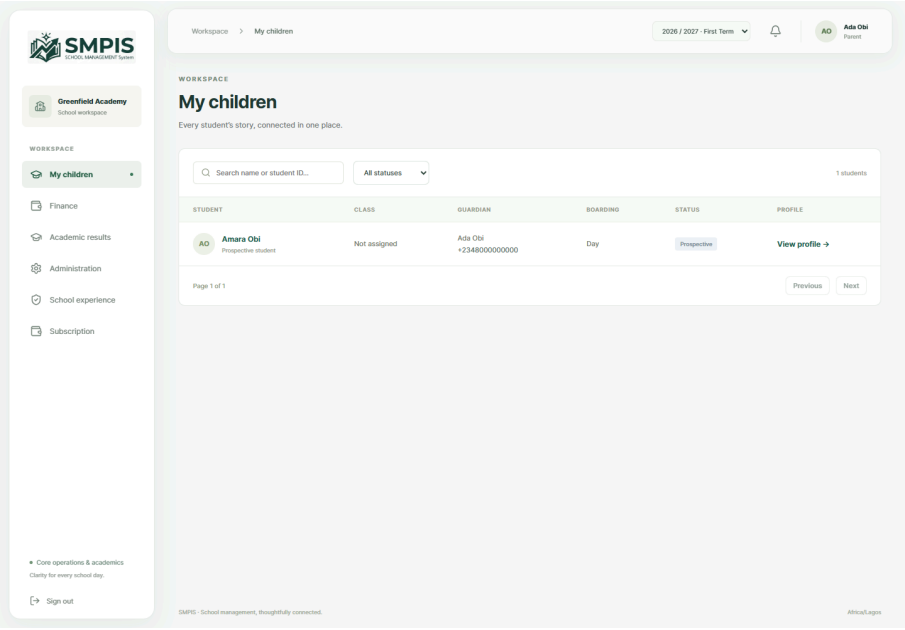

> Generating again returns the existing invoice. Changing fee structures later does not rewrite that invoice. If a bill is wrong, ask authorised finance staff to review it before collecting payment.

SCREENSHOT WALKTHROUGH

The parent’s first visit

Parent account → My children

This is the family’s view. A parent can use one set of credentials to access all children linked to their account.

Portal example · Parent account → My children

1. Open the school portal URL provided in the account email and sign in with the parent email and password.
2. Check My children and open a child’s profile to confirm the details.
3. Open Finance and select the term being paid.
4. If there are no children, ask the school office to check the account links. If children appear but no bill is visible, ask finance to check the term and invoice.

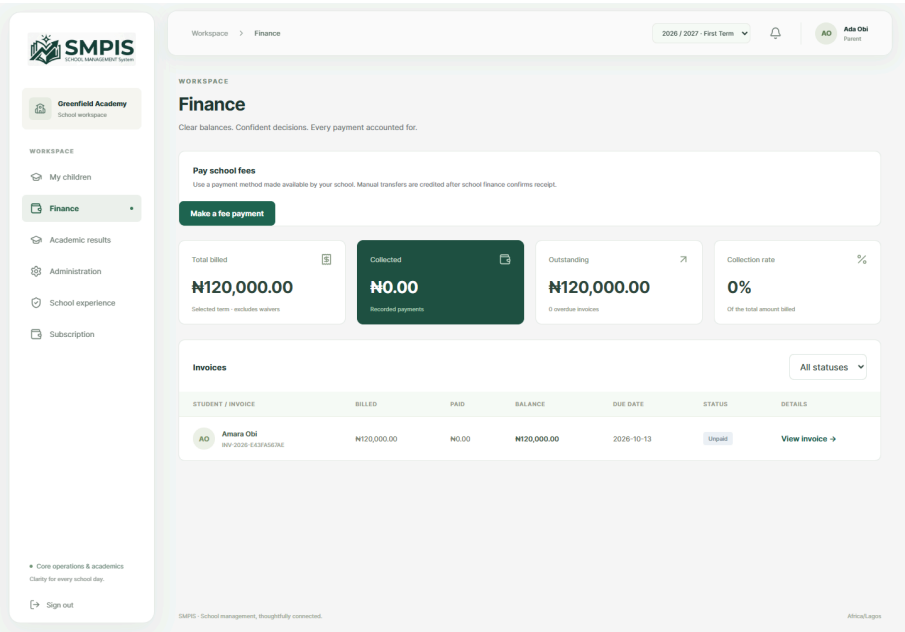

> The parent menu depends on their role and available features. Keep the school portal link handy for future terms.

SCREENSHOT WALKTHROUGH

Choose the bill and payment amount

Parent account → Finance → Make a fee payment

Parents pay an invoice belonging to a linked child. The portal shows only payment methods the school has made available.

Portal example · Parent account → Finance → Make a fee payment

1. In Finance, review the invoice and balance before paying.
2. Click Make a fee payment.
3. Choose the School payment method and the Invoice for the correct child.
4. Enter the Payment amount. For siblings, select each child’s invoice and complete a separate payment for it.

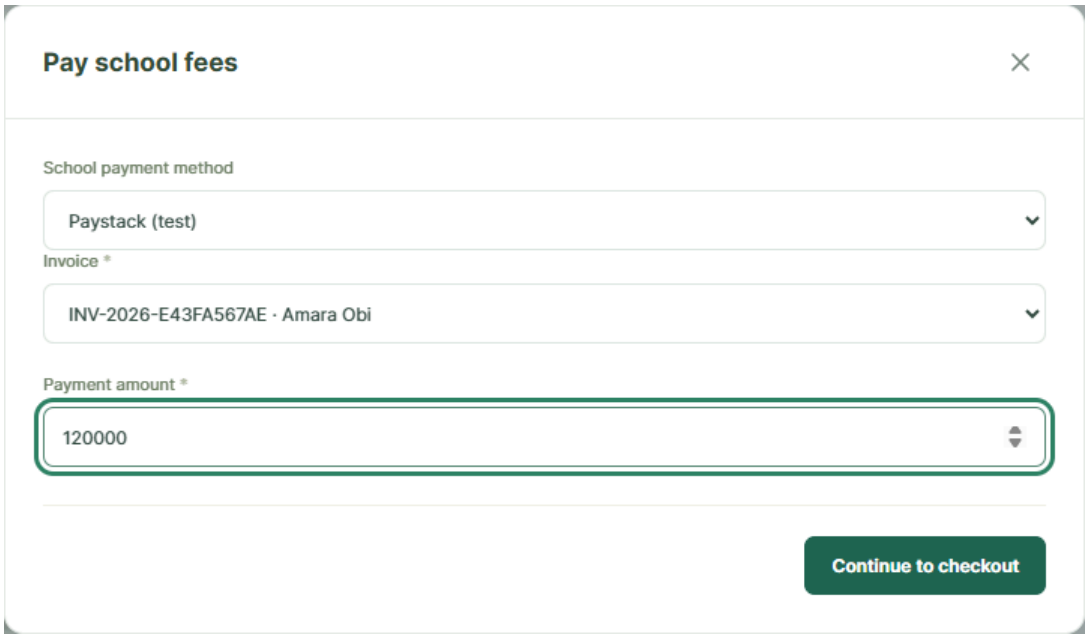

> If Make a fee payment is missing, the school should check enabled payment methods. If the invoice selector is empty, check the selected term, child link and outstanding invoice balance.

SCREENSHOT WALKTHROUGH

Complete an online payment

Parent account → Pay school fees

The same payment form changes with the selected method. This example shows Paystack in test mode. Parents choose a live method when paying real school fees.

Portal example · Parent account → Pay school fees

1. Choose the enabled online provider, then select the child's invoice and amount.
2. Click Continue to checkout and complete payment on the provider's checkout page.
3. Return to the portal and check the payment status and invoice balance. The server verifies the payment before crediting it.
4. If still pending, use Check payment where shown. Contact school finance with the transaction reference if the status remains unresolved.

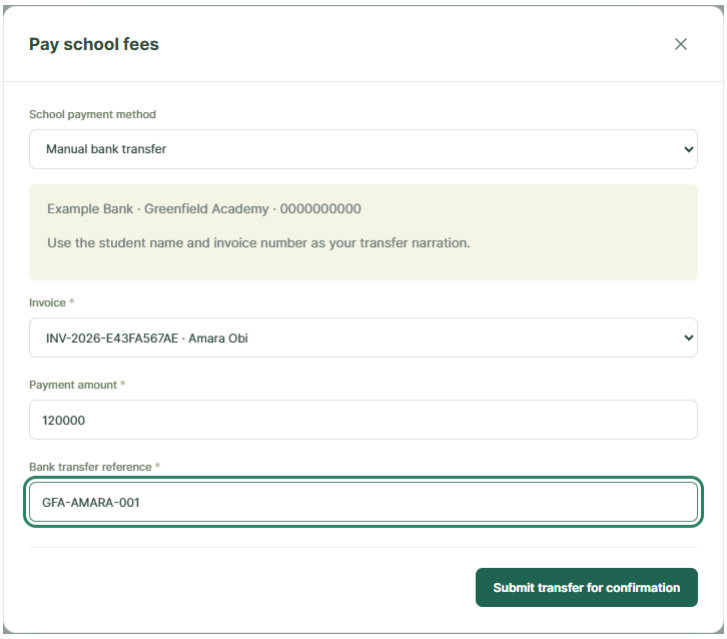

> Checkout pages belong to the chosen provider and can look different. TEST_CONFIRMED means a test was verified; it does not mean real school fees were collected.

SCREENSHOT WALKTHROUGH

Submit a manual bank transfer

Parent account → Pay school fees → Manual bank transfer

A transfer reference tells the school which payment to check. Submission records the claim; the school confirms the actual bank receipt.

Portal example · Parent account → Pay school fees → Manual bank transfer

1. Choose Manual bank transfer and read the displayed school bank details and instructions.
2. Make the transfer through your banking service to the school's actual account.
3. Choose the correct invoice, enter the amount transferred and Bank transfer reference.
4. Click Submit transfer for confirmation. Check School payment tracking for the pending transaction.

> Keep the bank confirmation and reference. The invoice balance changes after school finance confirms receipt. Do not use the fictional account in the example screenshot.

SCREENSHOT WALKTHROUGH

Confirm funds and finish enrollment

School account → Finance → Confirm bank receipt

The parent has submitted a transfer. The school's next job is to match it against the bank statement and confirm receipt.

Portal example · School account → Finance → Confirm bank receipt

1. Authorised finance staff open Finance and find the pending manual transaction.
2. Click Confirm bank receipt. Check the amount and transfer reference against the school's bank statement.
3. Once funds are received, click Confirm funds received. Review the updated invoice balance.
4. For a new learner, return to Admissions and click Enroll, then Enroll student once the invoice is paid or waived.

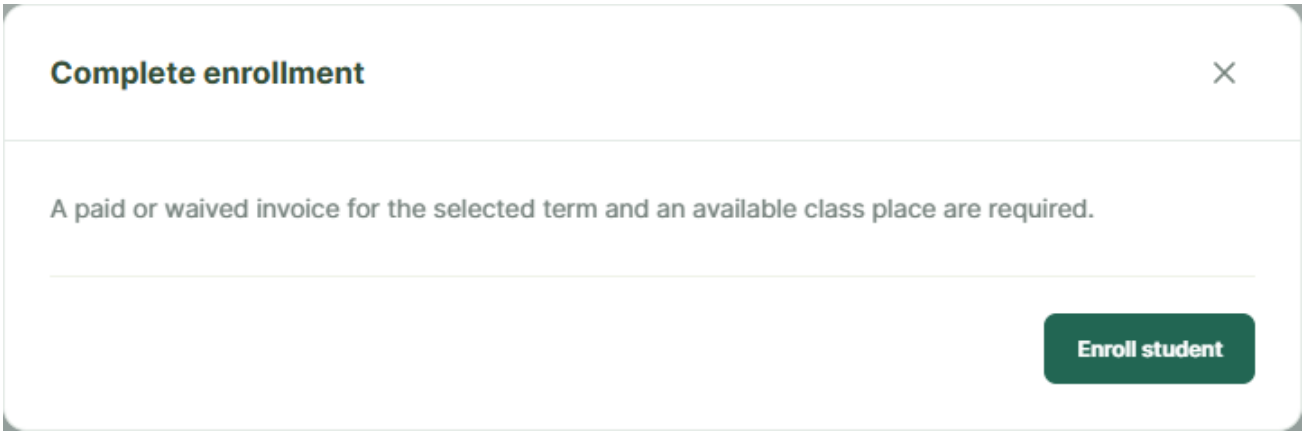

> Confirming a pending transfer already credits the invoice. Avoid also recording the same transfer as a separate payment. For payments collected outside this flow, finance can use Record payment and issue a receipt.

SCREENSHOT WALKTHROUGH

Complete the learner’s enrollment

Admissions → Enroll → Enroll student

The learner is now ready to join the class. Enrollment is the final admissions action after the fee and capacity checks have passed.

Portal example · Admissions → Enroll → Enroll student

1. Confirm the intended academic term in the top bar.
2. Find the application at Fees Pending and click Enroll.
3. Review the enrollment confirmation, then click Enroll student.
4. Open Students and confirm the learner’s Enrolled status, student number and assigned class.

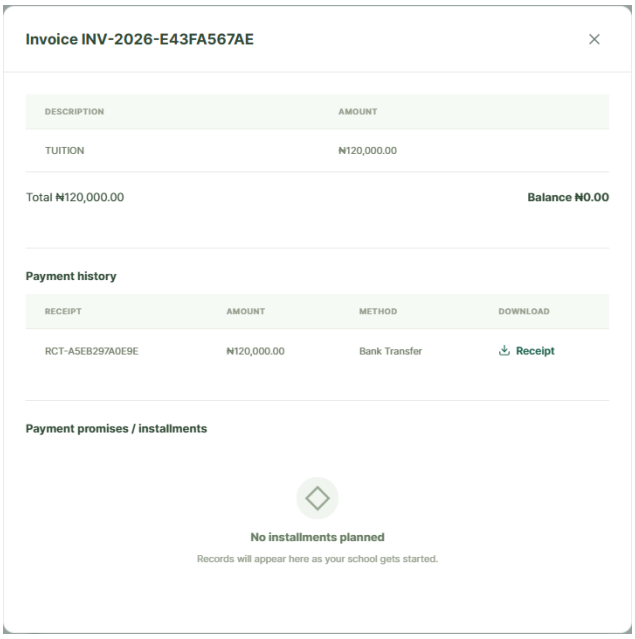

> If enrollment is blocked, check that the selected term belongs to the class academic year, the class has space, and the term invoice is fully paid or waived.

SCREENSHOT WALKTHROUGH

View the updated bill and receipt

Parent account → Finance → View invoice

The family should be able to see the result of their payment without contacting the office each time. Receipts provide a reference for both sides.

Portal example · Parent account → Finance → View invoice

1. Open Finance and review the invoice's status and remaining balance.
2. Click View invoice to see its charges and payment history.
3. Use the receipt download link alongside a recorded payment. Save it for your records.
4. If the balance is not what you expect, share the invoice and transaction references with school finance so they can trace the payment.

> Ready when: the confirmed payment appears, the balance is correct, and the receipt is available. A partially paid invoice retains an outstanding balance.

Learners, attendance and teaching

Use these after the school foundations are ready

Dashboard

Review the role-specific school overview, summaries and actions that need attention. Check the selected term before comparing totals.

Students / My learners / My children

Find learner records, open profiles and review details permitted by your role. Authorized staff edit profiles and parent links; families see linked children.

Attendance

Choose the class and date, record learner attendance and review available attendance records. Record attendance consistently for meaningful reports and alerts.

Curriculum → Topics

Create and organise the teaching plan for assigned subjects, including the topic sequence and planned teaching periods. Use the available import action when preparing many topics.

Curriculum → Coverage

Review completed and outstanding teaching across classes and subjects. Record coverage with the taught date and a reason for noncompletion where required.

Staff & attendance

Manage the permitted staff records and staff attendance views. A personnel record and a user login have different purposes; use Administration → Users for account access.

Reports

Download permitted school reports such as learner registers, attendance, finance, staff and academic/curriculum summaries. This report library is separate from Academics → Report cards.

Message parents

Allows the school administrator to prepare messages to the intended parent recipients. Check recipient scope and delivery results before assuming the message was received.

School experience and people

School experience / People & HR

School experience → Discipline

Create and follow discipline cases, record actions and inspect case history. Repeated incidents can inform follow-up.

School experience → Complaints

Register complaints, assign responsibility and track the response through the available workflow. Families see the actions allowed for their own records.

School experience → Surveys

Collect and review parent satisfaction responses and the summaries your role permits.

School experience → Policy

The administrator configures workflow rules used by school experience cases.

People & HR → Leave

Submit or review staff leave requests and manage the available approval actions.

People & HR → Profiles

Maintain staff employment and HR profile information.

People & HR → Vacancies / Applicants

Record open positions and track candidates through recruitment stages, interviews and hiring.

People & HR → Reviews

Record and review staff performance assessments.

People & HR → Calendar

Review the HR calendar for relevant staffing and leave planning.

> Operational menus and their submenus vary by role. Staff without HR management permission may see Leave only.

Facilities, insight and account help

Other sidebar menus

Facilities & assets → Maintenance

Log repair issues, assign responsibility and follow case progress and recorded costs.

Facilities & assets → Facilities

Maintain the school’s facility records used by operations staff.

Facilities & assets → Assets

Record equipment and assets, condition and responsible persons.

Intelligence

Review available school insights and evaluations. Check the underlying records and data completeness when interpreting an insight.

Alerts

Review permitted issues requiring action, such as attendance, finance, academic or operational follow-up. Open the relevant record and resolve the underlying issue.

Subscription

Review the tenant’s SMPIS plan and renewal/payment options. This pays for the school account’s service access, separately from parent school fees.

Support

The school administrator requests help with the tenant portal. Include the affected menu and record reference so support can investigate.

Account menu / Security

Manage the account options shown for your login, including available security and communication preferences. Sign out when finished on a shared device.

SaaS business

Platform-operator workspace, visible only to authorized platform operators. A school administrator uses their tenant menus for ordinary school setup.

Choose the right report and export

Reports / Academics → Report cards

1. For an individual learner’s term result, use **Academics → Report cards → View report → Download PDF**. Generate, finalize and publish first when sharing through family accounts.
2. For school registers and operational summaries, open **Reports** and choose an available report type. Apply its term, date or other filters before downloading.
3. For academic summaries by class, subject or teacher, use **Export academic reports** where shown. Choose CSV, Excel or PDF and the required grouping.
4. For curriculum exports, use the curriculum report option available to your role.
5. Check the downloaded period, class and totals before distributing. Student registers use current records; attendance reports use the selected dates; finance reports use invoice due dates.

> A report may contain personal learner information. Download and share only the records needed for the intended school task, using the access your role provides.

READY TO USE

Check the whole workflow once

Use one class, one teacher and one family first

1. **School setup:** school details, calendar, current term, classes and capacities are correct; staff accounts and roles work.
2. **Admissions:** a complete learner application reaches Fees Pending; guardian details and intended class are correct.
3. **Academics:** subjects and teacher assignments exist; grading rules are approved; the exam assessment and any timetable booking are correct.
4. **Finance:** class fees produce the expected invoice; a live received payment or approved waiver is reflected correctly; the receipt is available.
5. **Enrollment:** complete enrollment, confirm the learner's class and parent link, and check the term roster.
6. **Grading:** save a mark, reopen it and confirm persistence; verify that a real zero is distinct from an unrecorded mark.
7. **Reports:** complete all required scores and 100% subject weights, generate drafts, review comments, finalize and publish. Confirm the linked family can download the PDF.
8. **Daily work:** show each staff role its attendance, curriculum, finance or operations tasks. Close score entry explicitly when marking is finished.

> If something is blocked, check the term, role, class/subject assignment and roster first. For finalized reports or an explicitly closed term, follow the correction process in this guide.
